John,

An exhaustive physical security survey of the area site was completed on 7 February 1984 to enhance security against the terrorist threat. The following is a brief description of improvements currently augmented and also those in the installation stages:

1. [REDACTED]
[REDACTED] will provide highly trained combat MPs to defend the area with a six minute response time.
2. Bullet proof glass has been installed at the guard house and in the Operations Building.
3. Roll down steel grills protect the Operations Building.
4. They are greatly expanding the closed circuit TV system at the Ops Building--parking and entrance areas and the antenna sites.
5. An armed guard accompanies all construction workers and trucks, etc.
6. In-ground hydraulic vehicle stoppers have been ordered and will be strategically located.
7. There is a 100 percent inspection of all packages delivered and/or carried by visitors.
8. An armed guard located away from the gate guard conducts a countersurveillance exercise to observe any persons conducting a surveillance of the site. This also is conducted at the antenna sites by an armed guard who observes the site area from a vantage point that is not noticeable.
